

Proposed Enhancements — Decision Sheet

Eusèbe (Laravel 3, 2012) → Literary Heritage Archive migration · 2026-07-03 · Companion to PLAN.md §8

Each item is an improvement over v2 behavior. Mark each **v2** (keep original behavior, pinned by the characterization suite) or **adopt** (becomes a DELTAS.md entry with its own contract). Unmarked items default to v2 parity.

Already approved

ID	Idea	Why / Notes	Verdict (v2 / adopt)
P0a	Delete périodiques	Restores v2's own intent: the detail page links to /delete/periodique/:id — a route that never existed	adopt ✓
P0b	Delete lookups (auteurs, éditeurs, imprimeurs, localisations, genres, catégories, fréquences)	No deletion path exists in v2; needs the in-use strategy decided in P4	adopt ✓
—	Working uploads, proper HTTP verbs, confirmation dialogs, full auth	Inherent modernization deltas, already ledgered (B1, B2, B5, B9)	adopt ✓

B — Finishing what v2 started (half-built features)

ID	Idea	Why / Notes	Verdict (v2 / adopt)
P1	Display images on detail pages (thumbnails + lightbox)	v2 uploads and stores image paths but no view ever renders them — the images feature is write-only today	
P2	Real share feature: copy-link / mailto, or signed public read-only links	Both detail pages render a dead share icon; signed links reconcile full-auth with a shareable archive	
P3	Author page: naissance / décès / lien fields + list of works	The add-author form captures birth/death dates and a link that are never displayed anywhere	
P4	Lookup management screens: rename, merge duplicates, delete	78 éditeurs / 213 auteurs with no way to correct typos. Sub-decision — deleting an in-use lookup: block / reassign / cascade (recommended: block, with merge covering reassign)	
P5	Edit auteurs after creation	Same gap as P4 for author fields	
P6	Build the numéros / articles / illustrations feature	The dormant schema was designed for cataloging periodical issues and their articles. Large — recommended as a post-parity epic	

C — Browsing & finding

ID	Idea	Why / Notes	Verdict (v2 / adopt)
P7	Global search (titre / description / notes)	v2 has no search across 470 works	
P8	Combined filters (auteur AND année AND genre)	v2 browsing is single-dimension only	
P9	Sort options on lists		
P10	Pagination / virtualized lists	470 rows load as one flat page today; may be fine client-side — low priority	
P11	Counts on browse index pages (« 1885 — 12 ouvrages »)	Cheap, aids navigation	
P12	Browse périodiques by éditeur / dates	v2 offers titre only	

D — Data quality

ID	Idea	Why / Notes	Verdict (v2 / adopt)
P14	Input validation (required titre, sane year range, mois 1–12)	v2 accepts anything, including empty titles	
P15	Duplicate warning on inline lookup creation	The auteurs table already holds near-duplicates	
P16	Import-time normalization report (trim, flag duplicate candidates — never auto-merge)	Visibility only; data untouched	
P17	Unknown dates: keep « Inconnu » display semantics of année 0, store NULL	Mostly implied by the import cleaning rules	

E — UX & design

ID	Idea	Why / Notes	Verdict (v2 / adopt)
P18	Toasts + optimistic updates	Replaces v2's ok=1/0/4 full-page response codes	
P19	Unsaved-changes guard on forms		
P21	Dark mode	Nearly free with a modern setup	
P22	Bilingual UI — French default, English toggle	Public repo with an English name; visitors may not read French	
P23	Carry FontleroyBrown + green palette into the revamp as a heritage nod	Input to the D5 design-direction mockup	

F — Export

ID	Idea	Why / Notes	Verdict (v2 / adopt)
P24	Annexe B → PDF export	Print CSS already planned; PDF is one step further	
P25	CSV / BibTeX export of the catalog	BibTeX suits the bibliographic nature	
P26	More annex variants (by auteur, by genre)		

G — Ops

ID	Idea	Why / Notes	Verdict (v2 / adopt)
P27	archive:backup artisan command (+ optional schedule)	Directly serves the « store the backup somewhere better » problem	
P28	Publishable dataset seeders — the data itself, versioned in the public v3 repo	Candidate long-term form for the dump: the database becomes reproducible from the repo (ties to E9-S5)	
P29	Activity log of edits		
P30	Multi-user + roles	Recommended: skip — single admin matches reality	

Recommended shortlist

P1, P2 (signed links), P3, P4 (block + merge), P5, P7, P11, P14, P15, P18, P19, P23, P25, P27, P28 — with P6 as a named post-parity epic. Everything declined stays pinned to v2 behavior by the contract suite.
